SUMMARY

System Analysis-focused Business Information Technology student with hands-on experience designing full-scale ERP systems and mapping complex business workflows. Directed the development of an 11-module ERP system for a manufacturing company, translating high-level business logic into actionable technical specifications. Strong understanding of **requirements analysis**, **UML modeling**, and **relational database design**. Seeking a System Analyst internship to apply analytical problem-solving and process-driven workflows in a professional environment.

EDUCATION

The University of Jordan

B.Sc. in Business Information Technology, King Abdullah II School of Information Technology

Amman, Jordan

Expected Sep 2026

PROJECTS

AURA Stone Factory ERP System (Graduation Project)

Mar 2026 – Present

- Led a **3-person development team**, gathering and prioritizing functional requirements directly from an internal stakeholder using an iterative approach.
- Designed a **26-table relational database** supporting complex workflows across inventory, accounting, and production.
- Mapped an **end-to-end business pipeline** spanning order intake, multi-stage production workflows (Mixing → Curing → Completion), delivery dispatch, and revenue recording.
- Engineered a **Bill of Materials (BOM)** workflow with real-time stock feasibility checks, automated raw material deduction, and cost tracking per batch.
- Designed a **multi-line procurement process** with supplier-material mapping, bulk purchase order grouping, and automated inventory restocking upon receipt.
- Defined **Role-Based Access Control (RBAC)** across 7 distinct user roles and designed **Business Intelligence dashboards** for revenue tracking and production KPIs.
- Architected a **Kanban-style order pipeline** with 5 status stages tracking the lifecycle from pending to delivered.
- **Technologies & Tools:** PHP, MySQL, JavaScript, HTML/CSS, Git.

AI Task Delegation System (System Architecture Document)

2026

- Authored comprehensive **system documentation** for an AI-driven task delegation platform, defining core business logic, functional specifications, and structured tabular requirements.
- Conducted **Root Cause Analysis** utilizing **Fishbone (Ishikawa) diagrams** to identify operational inefficiencies and scientifically justify system features.
- Engineered structural and behavioral system models using **Mermaid**, translating requirements into clear process flows, sequence diagrams, and use case diagrams.

Skill Swap — Online Learning Platform

2025 – 2026

- Designed a **multi-role platform** (Student, Teacher, Admin), specifying dedicated dashboards, profile management, and user-specific workflows.
- Specified a **session booking system**, teacher verification pipeline, and authentication flows including OTP verification and password recovery.
- **Technologies & Tools:** PHP, MySQL, HTML/CSS, JavaScript.

TECHNICAL SKILLS & EXPERTISE

System Analysis & Design: Requirements Gathering, Root Cause Analysis (Fishbone Diagrams), Business Process Mapping, UML Modeling (Mermaid).

Business Domain Knowledge: Enterprise Resource Planning (ERP), Bill of Materials (BOM), Inventory Management, Production Planning, Procurement, Double-Entry Accounting, RBAC.

Database & Web: MySQL, Relational Database Design, Complex SQL, PHP, HTML/CSS, JavaScript.

Quantitative Methods: Economic Order Quantity (EOQ), Reorder Point (ROP) Analysis, Production KPI Modeling.

Tools & Languages: Git, GitHub, VS Code, XAMPP. Arabic (Native), English (Fluent).
